

LEAD POISONING

Lancaster County's Silent Epidemic

Lancaster County is ranked 4th worst in PA for childhood lead poisoning.

Lead poisoning is a serious health issue that can cause irreversible damage to young children.

Lead poisoning is incurable but 100% preventable.

The leading cause of lead poisoning is lead-based paint in homes built before 1978.

Penn Medicine Lancaster General Health's new **Lead-Free Families** program is aimed at getting the lead out of Lancaster County through:

- Lead Screening
- In-Home Lead Testing & Remediation
- Healthcare & Social Service Support
- Community Education & Outreach
- Public Policy Advocacy & Education
